

Grid cover

Option Code: [-GRID-]

Grid covers as fall protection for the recycling tank.

Illustrations may differ from the actual scope of delivery

Function

The grid cover prevents persons and animals in hazardous areas close to the recycling tank from falling into it. Foreign bodies (e.g. leaves, waste, etc.) that interfere with pump operation are also kept out.

Use is mandatory wherever the recycling tank is buried and no other effective fall protection equipment (e.g. optional *safety railing*) exist. Especially recommended for unsupervised systems.

Lockable version on request.

Technical description

Solid, hot-dip galvanised, walkable grille elements (5×105×210 cm) mounted on a steel frame painted in Traffic blue (RAL 5017) for mounting on the rim of the MobyDick recycling tank.
